Dear Sir-

I am begging you to step in and stop this horrific project that is occurring in our area. Please step in and review all the information that is out there regarding this irresponsible act that could have huge catastrophic implications for near and future generation of people in the surrounding areas. The simple fact alone that this toxic injection well sight is in the middle of a residential as well as there are 505 abandoned oil wells in 2.5 mile radius, should be reason enough to stop this. The risk is for potentially the water supply of 54 counties, including The Woodlands and Houston. Think about everything from drinking water to the water the surgeon washes his/her hands in before he opens up his next patient. The grim scenario of disaster could become reality in this great area if people in power like you don't stop it!!

Please, Please Please help us!!!

Thank you for your time and concern.

Everyone deserves water that is safe.

Sincerely,

(b) (6)
